REFERENCE LETTER

This is to confirm that EnergyAI, represented by Dr. Eng. Paweł Włoch, prepared a grid connection assessment report for the Biata Piska project on behalf of Eurus.

The report included a comprehensive assessment of the selected location, covering, among others:

- identification of the nearest transmission and distribution substations,
- analysis of issued grid connection conditions and refused connection applications in the vicinity of the project,
- review of transmission and distribution network development plans,
- overview of existing generation facilities in the surrounding area,
- proprietary analyses supporting the assessment of the grid connection potential for the selected location.

The report provided valuable support during the preliminary evaluation of the project. We particularly appreciated the comprehensive collection of information from multiple data sources and its presentation in a clear and structured format, which significantly streamlined the assessment of the project's investment potential.

We consider our cooperation with EnergyAI to have been professional, reliable, and delivered on time. The report provided valuable insights supporting the investment decision-making process and represents a useful analytical tool for companies developing renewable energy projects.

We confidently recommend EnergyAI as a trusted partner in the field of grid connection assessments for renewable energy projects.

Taichi Katayama
Director
Eurus Energy Europe B.V.
